The i6A4W series of non-isolated DC-DC step-down converters are ideal for creating additional high current output voltage rails from a single output 12V, 24V or 48V AC-DC or DC-DC power supply. The highly efficient i6A4W series accepts a very wide DC input and has a wide output adjustment range, with a choice of 1/16th brick footprint or SIP package. Output trim, remote sense, negative or positive logic remote On-Off comes as standard features. Power good, frequency synchronization and output sequencing are optional features.

Features

- Up to 250W in a 1/16th brick or SIP package
- Very high Efficiency up to 97%
- Wide Output Adjustment 3.3 to 15V & 3.3 to 40V
- Minimal External Components Needed
- Low Airflow With Minimal Derating Requirements

Benefits

- Very High Power Density
- Easier Thermal Management
- One Part For Multiple Applications
- Less Board Area Required
- Easier To Cool In End System

Notes

See website for detailed [specifications](#).

(1) Output voltage cannot exceed input voltage. Refer to Input vs. Output graphs provided.

(2) Full Feature module but without the SEQ (Sequencing) Pin 34 installed. This eliminates the need for external pull-up resistor when Sequencing feature is not being used.

(3) If the Sequencing feature will not be used, the SEQ Pin 34 needs to be tied to a 1.8-3.3V source via a 10k resistor. See [Full specification](#) for details.

Typical Application Circuit

Recommendation

1. TRIM resistor Rup should be connected to the i6A module as close as possible.
